

MatelHolic E-commerce Store

Minor-Project

The project is based on pure HTML, CSS and JavaScript.

This project is developed to build a E-commerce website where people can buy products such as sports, lifestyle products.

METAL
HOLIC

MetalHolic

This is a web based project which is developing with the help of pure HTML, CSS and JavaScript. Only fronted part is done in this project as it's a Minor-project. This project is now in under-developing stage.

01

Objectives

The primary goal of this website is to provide a platform where people can buy products such as sports products and lifestyle products.

02

Requirements

The Front-end part of this website is developed using pure HTML, CSS and JavaScript.

03

Features and Prototype

The main features of this website is, an user or consumer can create their account and buy products without any difficulty.

04

Future Planning

In future, I want to develop the Back-end part of this website too, where data can be stored dynamically.

Objectives

- The main objective of this website is to make available sports products and lifestyle products to the users or customers of this site.
- This project focuses on the distribution of quality of products in the rural areas of the india at affordable price.
- The UI (User Interface) is very simple as it can be interact easily by anyone.

Front-End

HTML

HTML is the standard markup language for Web pages. With HTML you can create your own Website. In this website HTML used to create the pages of the website.

CSS

CSS is the language we use to style an HTML document. CSS describes how HTML elements should be displayed. In this website CSS is used to designed all the HTML pages of the website

JavaScript

JavaScript is the world's most popular programming language. JavaScript is the programming language of the Web. In this website JavaScript is used to write all the mathematical and logical operation of this website.

Requirements

Icons

The all icon, logos and stickers of the website are taken from the Font Awesome. Font Awesome is the Internet's icon library and toolkit, used by millions of designers, developers, and content creators.

IDE

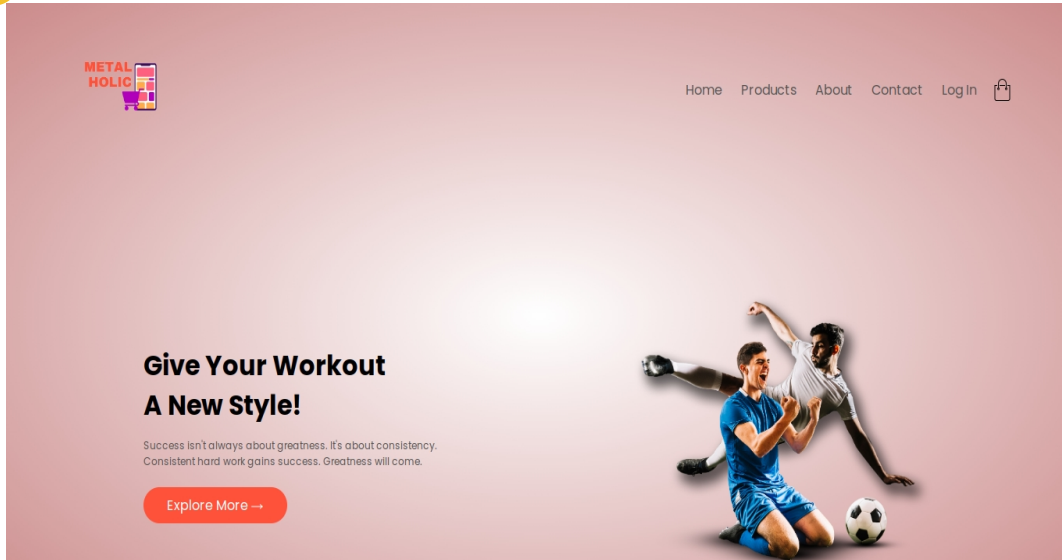

An integrated development environment (IDE) is software for building applications that combines common developer tools into a single graphical user interface (GUI). All programs of this written on **Visual Studio Code** which is an IDE.

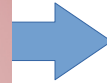

Features and Prototype

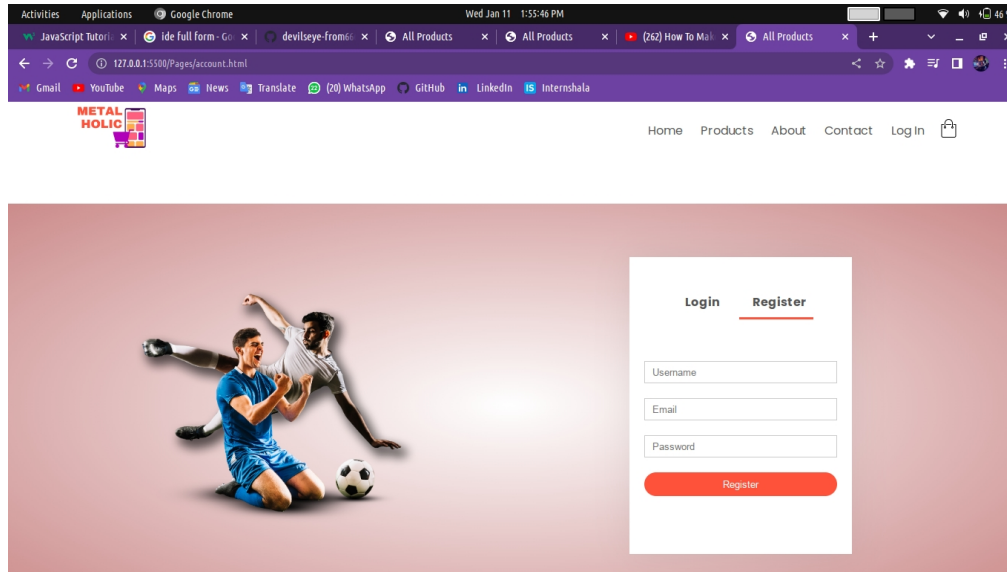

Home page of the Website

This is the Home Page of the website. In the top right side of the website we have navigation bar. With the help of the navigation bar user can interact with website without any difficulty.

Features and Prototype

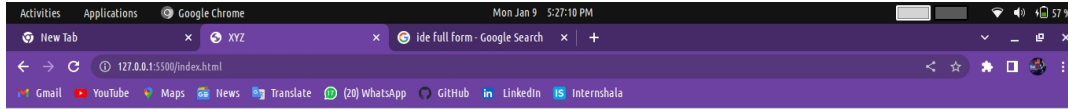

Login and Registration page

In this Page of the website, users or customers can create their own accounts and , maintain their own data or information.

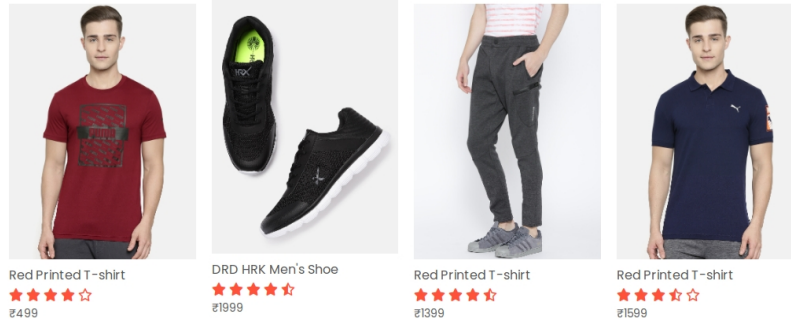

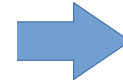

Features and Prototype

Featured Products

Product section of the website

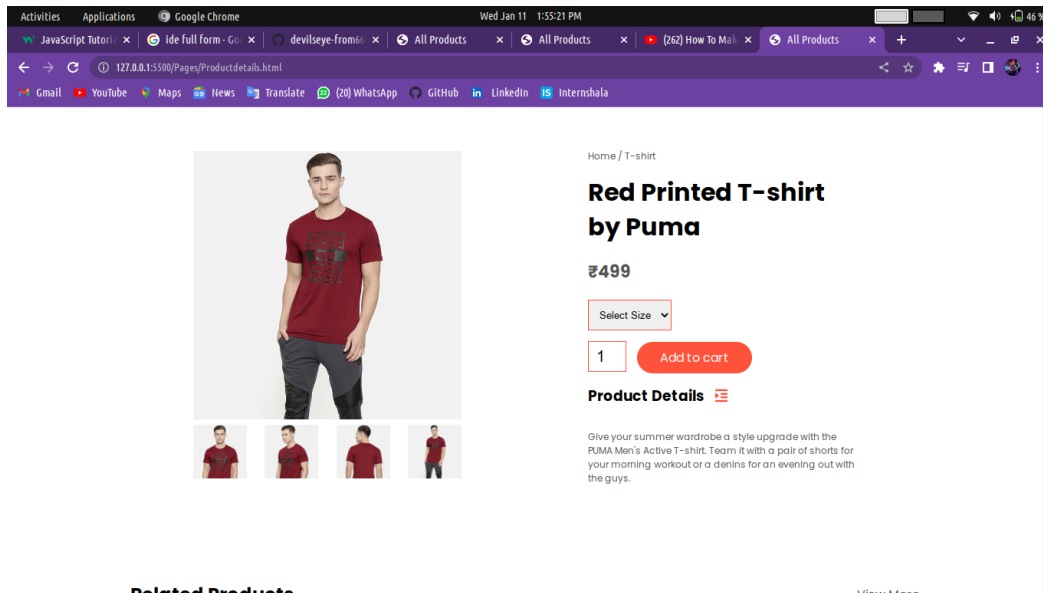

This is the Products Section of the website where user or consumers can select products and order them according to their needs.

Features and Prototype

Single Product details page

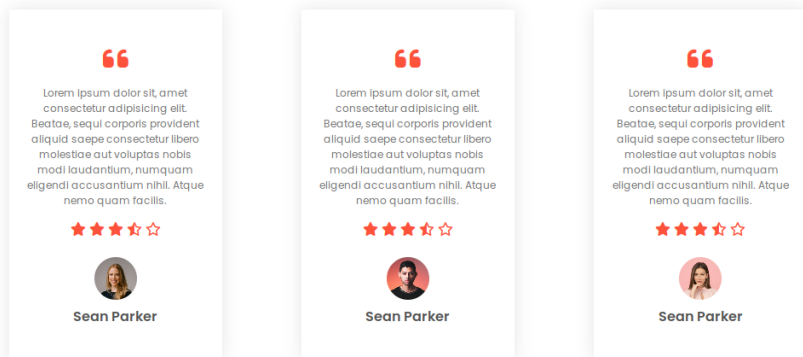

In this page, user can see all the information related to a particular product and can order the particular product.

Features and Prototype

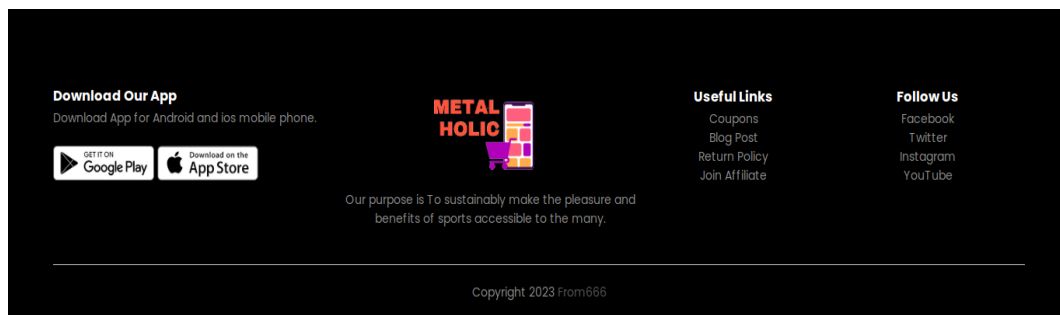

Rating/review section

In this section, User can write feedbacks about our website and products.

Features and Prototype

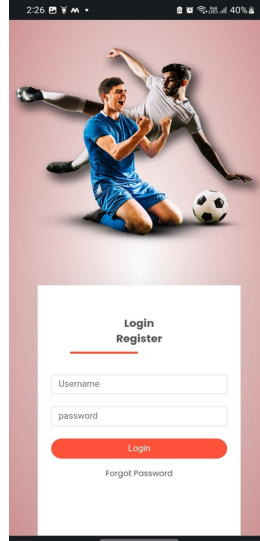

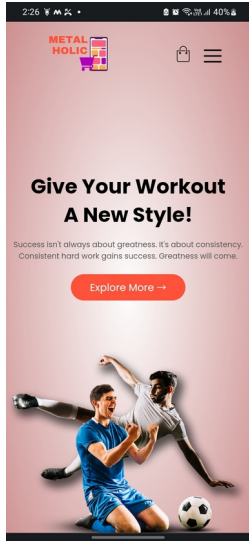

Footer Section

In footer section, we have multiple linkings and information regarding to this website.

- Features and Prototype

Responsive

This website is also responsive which means user can open the website on any size of screen.

Future Planning

- In future, I want to develop the Back-End part of this website also. It makes the website more dynamic.
- I want to connect database with the website to automatically change the data or information without any difficulty.
- I also want to deploy this site to the public in future.
